PROFESSIONAL SUMMARY

Data analyst. I cover the reporting cycle end to end: sourcing from databases, REST APIs and spreadsheets, cleaning and validation, SQL modelling and extract, transform and load (ETL) flows, exploratory analysis, descriptive and inferential statistics, and dashboards in Tableau, Power BI and Plotly Dash. Advanced Excel is part of the daily toolkit, from pivot tables and Power Query to VBA macros and financial models. I work with a quality discipline that travels with the numbers: quality and completeness checks against specification, reconciliation across sources, traceability of where every figure comes from, and automated tests that stop dirty data from reaching the report. My background is commercial, with a degree in Business Administration from UDLAP, which is why I chase the why behind a metric and present it to non technical owners and senior stakeholders as a decision rather than a chart. I also build the automation layer around reporting, and I currently work as a software engineer, which is where the engineering discipline in my pipelines comes from. Native Spanish, C1 advanced English.

CORE SKILLS

Reporting, Dashboards & Communication Tableau · Power BI with DAX and data modelling · Plotly Dash · dashboard design and maintenance · definition and tracking of key performance indicators (KPIs) · recurring reporting in the required format · executive reports and data storytelling for non technical stakeholders

Advanced Excel & Office Advanced Microsoft Excel (pivot tables, VLOOKUP and advanced formulas, VBA and macros, financial models with IRR, NPV and cash flow projections) · Power Query · PowerPoint for executive presentations · Microsoft Word for reports · Google Sheets

SQL, Data Modelling & ETL SQL (joins, CTEs, aggregations, subqueries and window functions) · data modelling for reporting · extract, transform and load (ETL) · integration and consolidation of multiple sources · REST APIs and webhooks · automation of recurring loads · PostgreSQL, MySQL, MongoDB and Supabase · Databricks · Parquet and pyarrow

Data Quality, Validation & Traceability Quality and completeness checks against specification · cleaning and cleansing · detection and resolution of inconsistencies, duplicates and missing values · reconciliation across sources · data integrity and traceability of figures · automated quality tests with pytest · procedural documentation and handover

Analysis, Statistics & Anomaly Detection Exploratory data analysis (EDA) · distributions, skew and long tails · outliers and percentiles as reference thresholds · correlation matrices · time series and spike detection · descriptive and inferential statistics · hypothesis testing (Welch t test and Mann-Whitney U) · bootstrap confidence intervals · A/B testing and cohort analysis · minimum sample size rules

Python & Modelling Python (pandas, NumPy, SciPy, scikit-learn, matplotlib and seaborn) · Jupyter Notebook · R (basic) · web scraping · classification, regression and clustering (K-means, silhouette, Random Forest and XGBoost) · feature engineering · evaluation metrics (precision, recall and AUC-ROC) · Git and version control

Cloud & Applied Artificial Intelligence Microsoft Azure, AWS and Databricks · Docker · self hosted n8n · AI agents, RAG and document processing with optical character recognition (OCR), applied to extracting unstructured data and automating recurring reporting

PROFESSIONAL EXPERIENCE

Software Engineer

Jul 2026 to Present

Dot Com Media (DCM Moguls) · Remote, California, USA

- Build and operate production data flows and automations that integrate the agency CRM, databases and APIs, and debug their performance with real usage data.
- Work in English with a distributed team, delivering against deadlines across several concurrent projects.

Founder

Oct 2025 to Present

NyxAI Studio · Mexico City

- Run a data and automation consultancy for companies in Mexico, owning the full cycle: gathering needs with the client, proposal, rollout to production and support.
- Build data flows and reporting tooling: integrate CRMs, spreadsheets, databases and REST APIs, clean and validate the information, and automate the generation of indicator reports and dashboards for operating and commercial teams.
- Design the executive reports business owners use to decide, and document each procedure before automating it, which leaves traceability of where every figure comes from.

Business Development Associate
Cenote Gardens · Tulum, Mexico

Jun 2024 to Jul 2025

- Designed and built commercial dashboards in Excel from HubSpot CRM exports to track key performance indicators (KPIs) for lead generation, conversion and closing, owning the data integrity of the funnel to guarantee full traceability through to the close.
- Built financial models in Excel (IRR, NPV and cash flow projection) to support pricing decisions with investors from Mexico, the United States and Europe, while also leading the commercial team.

Independent trader, assets and crypto assets
Self employed · Mexico City

Jan 2020 to Present

- Manage a portfolio across several asset classes under a formal risk framework (position sizing, stop levels and reward to risk ratio) and develop quantitative analysis and backtesting scripts in Python over time series.

Professional internships
Add Valant and Hotel Four Points by Sheraton · Puebla, Mexico

Jan 2023 to Dec 2023

- Updated and validated client databases, correcting inconsistencies before operational use, and handled invoicing and collections according to internal procedures and committed deadlines.

SELECTED TECHNICAL PROJECTS

AI labour market: source auditing and measurement with confidence intervals

- Pipeline of my own in Python that collects job postings from the Adzuna API, classifies them with a custom taxonomy and normalises salaries to comparable purchasing power with the World Bank PPP factor. Medians by metro area with 90 % bootstrap confidence intervals and a minimum sample size rule of 30 observations, over 3,781 postings and 85 automated tests.
- Discarded a public 50,000 row dataset after detecting from its shape that it was generated, and filtered out the salaries the provider models rather than publishes.

Telecom: flagging underperforming operators with thresholds derived from the data

- Flagged 44 operators over 53,902 call records with an anomaly threshold on the 75th and 25th percentiles and a minimum of 30 calls per operator, validated with Mann-Whitney U at p below 0.001.

Model Fitness: churn prediction and customer segmentation

- Compared logistic regression against random forest and chose logistic regression by prioritising recall (0.81 against 0.76, with 0.92 accuracy and 0.86 precision), because the business needed to catch as many clients at risk as possible.
- Segmented with a Ward dendrogram and K-means with five clusters, profiling each group by churn rate, from 7 % to 40 %.

Digital product analytics: SQL, A/B testing and cohorts

- Analysis of a digital platform end to end in SQL and Python: conversion funnels, cohort retention and revenue metrics (LTV and ARPU), closing with an executive report of actionable recommendations.

EDUCATION

Data Science and Data Analytics Bootcamp
TripleTen

2025

B.A. in Business Administration
Universidad de las Americas Puebla (UDLAP), Puebla, Mexico

2024

CERTIFICATIONS AND PROFESSIONAL DEVELOPMENT

DataCamp · Power BI: Data Preparation, Data Transformation and Customer Churn Case Study

2022

TripleTen · Data Science Bootcamp achievements: Dashboards Whiz (Tableau and Dash) and Business Analysis Guru (business metrics and A/B testing)

2025

DataCamp · Introduction to Databricks

2026

DataCamp · Python APIs: FastAPI and OpenAI API

2026

Microsoft Learn · Azure AI: Document Intelligence, Azure OpenAI and Azure AI Foundry

2026

Anthropic · Official Claude courses: Claude Code, Prompt Engineering, Building with Claude, MCP and Tool Use

2025

DataCamp · Retrieval Augmented Generation (RAG) with LangChain, DevOps Concepts and Software Development with Claude Code

2026

LANGUAGES

Spanish: native. **English:** C1 advanced; natively bilingual through Mexican and Australian dual nationality.
